

# Busy and profitable look the same at the door.

Every night we read your numbers and tell you what you kept. And why.

Syphor reads the data inside your business and the data outside it — your point of sale, your invoices, the weather and the reviews, even your managers' notes — and writes one page before you wake up. It arrives by email or text before seven.

## WHAT ARRIVES

One night, every lens. A GM reads his own, then flips to the kitchen, then the money. Nobody is locked into one.

## WHAT IT READS

Syphor connects to what you already have — sixty systems, and seven things that need no system at all: weather, events, reviews, social, your competitors, the logbook and invoices.

Toast, Square, Clover, Oracle MICROS, Lightspeed and Revel are read today; eighteen more open with your own key. Not on the list? We build it, and we do not charge you for it. Five business days, once we have what we need from your system.

Run five restaurants on three different systems and they still land on one page, the same morning.

## WHAT IT COSTS

**\$199**

a restaurant, a month

**\$250**

setup, once, per restaurant

**\$399**

corporate, a month, from five restaurants — only if you have one

No tiers. Every restaurant gets all of it.

## THE BAR IT HAS TO CLEAR

**It costs \$6.54 a day. It has to find you \$6.54 a day.**

Thirty days to find out. Card on file, nothing charged until day 31. If it finds nothing, you owe nothing.

**One page, every morning.**
